Lab #6

What we learned on this lab was how we can see the different status on processes, we think that it is important for us to know all the basics on process handling since later on this will be a task we must do on an everyday basis if we want to focus on the use of servers. Furthermore, we truly believe that process handling is one task that we as computer systems students must know how to handle to make the most out of the resources we have on a computer.

On this practice we used most of the commands presented on the user manual, but one that we found most useful was *ps* because it helped us to see briefly how the system describes the processes and how they are presented to the user as however the user wants the machine to present the data.
